

Nicaragua Telecom-Grade Router LPO

Article Overview

Telecom-grade routers in Nicaragua must obtain TELCOR homologation and a No Objection Certificate (NOC) before import or commercialization, with mandatory black labeling for compliance.

Regulatory Overview

In Nicaragua, all telecommunications equipment that connects directly or indirectly to public networks, uses the radio spectrum, or emits radio waves must undergo a homologation process and receive a Certificate of Homologation from the Instituto Nicaragüense de Telecomunicaciones y Correos (TELCOR) before being imported, marketed, or used . This includes telecom-grade routers intended for enterprise or service provider use.

Certification Process

- Certificate of Homologation (Type Approval):
 - The router model must first be certified by TELCOR to ensure compliance with technical, regulatory, health, and safety standards .
 - This certificate permanently authorizes the model to operate and be commercialized in Nicaragua.
- No Objection Certificate (NOC):
 - After homologation, an NOC must be obtained to authorize importation and customs clearance.
 - The NOC is valid for 180 days and requires the homologation certificate number for application
