

Optical power meter APM

Article Overview

Optical power meters (OPMs), including models like TRIBRER APM60 and APM80, are instruments used to measure optical signal strength in fiber optic networks, essential for installation, maintenance, and testing.

What is an Optical Power Meter (OPM)?

An optical power meter is a device that measures the strength of light traveling through a fiber optic system, typically displaying results in dBm for absolute power or dB for relative loss. It works by converting incoming optical energy into an electrical signal using a photodiode detector, allowing technicians to verify signal levels at transmitters, receivers, or intermediate points in a network. OPMs are widely used in fiber network testing, SFP module verification, and insertion loss measurements.

TRIBRER APM60 and APM80

The APM60 and APM80 are handheld optical power meters designed for portability and ease of use. Key features include:

- Design: Smartphone-style, lightweight, and easy to carry. APM60 is white, APM80 is black.
- Wavelength Support: Multi-mode fiber at 850nm and 1300nm; single-mode fiber at 1310nm, 1490nm, 1550nm, and 1625nm.
- Connectors: APM80 supports FC and 2.5mm universal adapters; APM60 supports 2.5mm universal connectors compatible with FC, SC, and ST adapters.
- Functions: Both models feature low power consumption, auto power-off after 10...
