

Parameters of Lao Aluminum Alloy Cable Trays

Overview

Height: 100mm, 150mm, 200mm. Aluminum alloy cable trays have high corrosion resistance. They are suitable for power plant, chemical plant, petrochemical and other fields, especially suitable for the high corrosion. All tray sections will support an additional 200 lb concentrated load on any portion of tray (side rail, rung, etc.) above and beyond published load class. Extra wide aluminum rungs are welded to extruded aluminum I-beam side rails. The selection of material and finish is a function of the environment in which it is used in a wide range of environments, and easily formable (Appendices II and III). With anodized or powder-coated surface for enhanced corrosion resistance, it boasts sleek appearance, light weight, durability and easy installation, ideal for high-humidity and corrosive environments. Lightweight and High Strength 2. Because of their lighter weight aluminum cable trays are easier to install than steel cable tray. The aluminum cable tray is a lightweight, durable, and cost-effective solution used for organizing and safely carrying electrical and data cables.
