

Plug the router into the lc interface

Article Overview

To connect an LC fiber interface to a router, carefully prepare, clean, and insert the LC connector into the router's LC port, ensuring proper alignment and testing for signal integrity.

Understanding LC Connectors

LC (Lucent Connector) is a small form factor fiber optic connector with a 1.25 mm ferrule, widely used in modern routers, switches, and optical modules due to its compact size and secure push-pull latch mechanism . LC connectors are ideal for high-density applications and support both simplex and duplex configurations .

Preparation Steps

- Gather Tools and Materials: LC fiber connectors, fiber strippers or cutters, cleaning tools (alcohol wipes, fiber cleaning pen), high-precision cleaver, and testing equipment such as a power meter or OTDR .
- Clean Work Area: Ensure the workspace is free of dust and contaminants to prevent signal degradation .
- Inspect Fiber: For pre-terminated cables, keep dust caps on until ready to connect. For raw fiber, strip the outer jacket carefully without nicking the fiber core .

Connecting the LC Fiber

- Clean the Fiber End: Use alcohol wipes or a fiber cleaning pen to remove dust, grease, or fingerprints from the fiber end face .
- Cleave the Fiber: Use a high-precision cleaver to create a flat, smooth end face at a 90° angle to minimize insertion loss
