

Price of fiber optic sensors on shelves

Article Overview

Fiber optic sensors typically range from \$50 to several hundred dollars per unit, depending on type, manufacturer, and specifications.

Typical Price Ranges

- Basic point sensors (e.g., simple intensity or proximity sensors) often start around \$50–\$150 per unit.
- Advanced sensors such as fiber Bragg grating (FBG) strain or temperature sensors can cost \$200–\$500 or more per unit, depending on precision and wavelength range.
- Specialized or distributed sensors for structural health monitoring, aerospace, or oil and gas applications may exceed \$1,000 per unit due to higher complexity and durability requirements .

Factors Affecting Price

- Sensor Type: Intrinsic sensors (where the fiber itself is the sensing element) are generally more expensive than extrinsic sensors.
- Measurement Capability: Sensors measuring multiple parameters (strain, temperature, pressure) or offering distributed sensing along the fiber are costlier.
- Manufacturer and Brand: Well-known brands like OMRON, Baumer, or FBGS often command higher prices due to reliability and support .
- Accessories and Packaging: Fiber optic cables, connectors, collimators, and mounting hardware can add to the total cost.
- Volume and Procurement Channel: Buying in bulk from distributors like Mouser, Farnell, or RS may reduce per-unit cost, while single-unit purchases are typically higher
