

Price of grating fiber optic thermometer

Article Overview

Fiber Bragg Grating (FBG) thermometers typically range from economical bare-fiber sensors to higher-priced packaged units, with costs influenced by temperature range, packaging, and measurement points.

Pricing Overview

FBG temperature sensors vary widely in price depending on configuration and application:

- **Bare Fiber Sensors:** These are the most economical option, suitable for direct fiber installation in controlled environments. They are ideal for single-point measurements and standard temperature ranges (-40°C to 300°C) and generally cost less than packaged units .
- **Packaged Sensors:** Sensors with protective housings or armored coatings are more expensive but offer durability and easier installation in harsh industrial environments. High-temperature variants (400°C to 800°C) require specialized coatings and protective packaging, significantly increasing costs .
- **Multi-Point Arrays:** Deploying multiple FBG sensors on a single fiber (e.g., 8, 16, or 32 points) reduces the per-sensor cost while enabling distributed temperature monitoring along cables, transformers, or pipelines .

Factors Affecting Price

- **Temperature Range:** Standard industrial ranges (-40°C to 300°C) are moderately priced, while high-temperature sensors (up to 800°C) are more costly due to specialized materials
