

Price of power cables inside enclosed cable trays

Article Overview

The cost of power cables inside enclosed cable trays varies widely, typically ranging from \$1 to \$10 per foot for standard industrial cables, with enclosed tray systems adding \$20-\$100 per meter depending on material and size.

Factors Affecting Price

1. Cable Type and Rating Power cables used in enclosed trays are usually Tray Cable (TC) or Metal-Clad (MC) cables, rated for 600 volts and designed for industrial or commercial use. TC cables can be flame-retardant, crush-resistant, and impact-resistant, with ER (exposure-rated) variants allowing short unsupported runs outside the tray . Prices vary by conductor size, insulation type, and voltage rating, typically \$1-\$5 per foot for smaller gauge cables and \$5-\$10 per foot for larger multi-conductor or armored cables. 2. Enclosed Cable Tray Material and Size Enclosed cable trays are made from galvanized steel, stainless steel, or heavy-duty GI plates, providing protection against physical damage, dust, and moisture . Standard widths range from 100 mm (10 cm) to larger sizes for high-density cabling. Costs depend on material, load capacity, and length, generally \$20-\$50 per meter for standard steel trays and up to \$100 per meter for heavy-duty or stainless steel trays. 3. Installation Considerations Installation costs include labor, supports, splicing, and securing cables at intervals (typically every 6 feet for TC-ER cables). Industrial environments may require additional safety measures, walkable trays, or custom layouts, which can increase total cost. Labor and installation typically add \$10-\$30 per meter depending on complexity....
