

Routers capable of installing optical modules

Article Overview

Routers with SFP or SFP+ ports can connect directly to optical modules, enabling high-speed fiber-optic internet connections.

Understanding Optical Module Connectivity

Routers that support SFP (Small Form-factor Pluggable) or SFP+ ports allow direct connection to fiber-optic networks using compatible optical modules. These modules convert optical signals to electrical signals for the router, supporting high-speed data transmission over long distances. SFP+ ports are typically used for 10G Ethernet and Fiber Channel applications, while standard SFP ports support speeds up to 1G or 2.5G depending on the module and router capabilities .

Key Features to Look For

- Hot-swappable modules: Many SFP/SFP+ modules can be replaced without powering down the router, providing flexibility and minimal downtime .
- WAN port configuration: Routers often allow the SFP/SFP+ interface to be set as the WAN port for direct ISP fiber connections .
- Compatibility with ISP modules: Some ISPs provide verified SFP/ONU sticks for direct connection. Always check with your ISP to ensure the module works with your router .
- Speed and distance support: Depending on the module, fiber connections can reach up to 80 km, far exceeding copper Ethernet limits
