

Rwanda EPON Equipment OSFP

Article Overview

Rwanda's GPON deployments can utilize OEM optical transceivers, including OSFP modules, for high-speed, scalable fiber networks.

OSFP Overview

OSFP (Octal Small Form Factor Pluggable) is a pluggable module standard designed for high-speed optical networking. It supports 8 high-speed electrical lanes with data rates of 400 Gbps (8x50G), 800 Gbps (8x100G), or 1.6 Tbps (8x200G), and up to 36 OSFP ports per 1U front panel . The OSFP-XD variant doubles the density with 16 lanes, supporting up to 3.2 Tbps, but OSFP and OSFP-XD are not cross-compatible due to mechanical and electrical differences . OSFP modules can include integrated heatsinks or require external cooling solutions (RHS) depending on the variant.

GPON Equipment in Rwanda

GPON (Gigabit Passive Optical Network) equipment, including OLT (Optical Line Terminals) and ONU (Optical Network Units), is available for Rwanda through OEM suppliers. These devices often use OSFP or QSFP28 transceivers for high-speed data transmission . OEM providers can supply modules compatible with major brands like Cisco, Huawei, Nokia, Juniper, and Calix, and offer customized solutions for local network requirements . Modules such as the HTOSFP-800G 2xSR4 support 800Gb/s twin-port operation with short-reach multimode fibers, suitable for high-performance computing or dense GPON deployments .
