

Setting up a wireless router with China Telecom fiber optic cable

Article Overview

You connect a wireless router to China Telecom fiber by linking the fiber cable to an ONT, then connecting the ONT to your router via Ethernet, and configuring the router with the ISP credentials.

Step 1: Identify the Components

- Fiber Optic Cable: Provided by China Telecom, usually single-mode with SC/APC or SC/UPC connectors.
- Optical Network Terminal (ONT): Converts the fiber's light signal into an electrical signal your router can use. China Telecom typically provides this device.
- Router: A wireless router with a WAN/Ethernet port to receive the internet feed.
- Ethernet Cable: To connect the ONT to the router's WAN port .

Step 2: Connect the Fiber to the ONT

- Locate the fiber optic wall outlet where China Telecom's fiber enters your home.
- Plug the fiber optic cable into the ONT's designated port. Ensure the connector is clean and properly seated to avoid signal loss .
- Power on the ONT and wait for the status lights to stabilize. A solid green or blue light on the PON/Optical indicator confirms a successful connection .

Step 3: Connect the ONT to the Router

- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN port. The WAN port is usually labeled and may be colored differently from LAN ports...
