

Specifications of polymer cable trays in Afghanistan

Article Overview

Polymer cable trays in Afghanistan, including fiberglass reinforced polymer (FRP) types, are lightweight, corrosion-resistant, non-conductive, and suitable for industrial and commercial electrical installations.

Material and Construction

Polymer cable trays in Afghanistan are typically made from fiberglass reinforced polymer (FRP), also referred to as glass fiber reinforced plastic (GFRP). These trays are engineered for high strength, stiffness, and durability, with continuous glass fiber reinforcement providing resistance to mechanical stress and permanent deflection under load . The trays are non-conductive, making them safe for electrical environments, and are resistant to corrosion, chemicals, and extreme temperatures, which is essential for harsh industrial or outdoor conditions . FRP trays often include UV protection to prevent degradation from sunlight exposure .

Dimensions and Design

FRP cable trays are available in various side rail thicknesses, typically ranging from 4.5 mm to 6 mm, depending on the series and load requirements . They are designed with interconnected channels or trays to support and organize electrical cables efficiently. The smooth surface finish reduces friction, preventing cable damage and facilitating easy cable pulling and maintenance . Accessories such as fittings, splices, covers, cantilever supports, and trapeze junctions are available to complete the inst...
