

Stainless Steel Cable Tray Colors

Article Overview

Stainless steel cable trays are typically metallic in appearance, with natural silver or chrome finishes, and do not come in a wide range of colors.

Standard Appearance

Most stainless steel cable trays are made from 304 or 316 stainless steel, which naturally has a silver metallic color. Some trays feature a chrome finish that enhances corrosion resistance and gives a slightly shinier, reflective surface. This finish is common in commercial and industrial applications where aesthetics and durability are important. The natural metallic look is standard and widely accepted in data centers, hospitals, and industrial facilities.

Influence of Stainless Steel Grades

- SS201: Lower nickel content, slightly duller silver, suitable for dry indoor environments.
- SS304: Standard grade, bright silver, commonly used in most indoor and moderately corrosive environments.
- SS316L: High corrosion resistance, slightly darker or more matte silver, ideal for harsh or outdoor environments.

The grade affects the shade and reflectivity of the tray but does not introduce vibrant colors like painted or powder-coated trays.

Optional Coatings and Treatments...
