

Standard Size of Distribution Box Pins

Article Overview

Distribution box pins typically follow standard industrial and IEC specifications, with common diameters ranging from 4 mm to 10 mm depending on current rating and connector type.

Pin Sizes and Spacing

In low-voltage distribution boxes, the pins or studs used for connecting busbars, MCBs, or incoming/outgoing circuits generally follow these conventions:

- Diameter: Pins or studs are commonly 4 mm, 6 mm, 8 mm, or 10 mm, depending on the current rating of the circuit and the type of protective device installed (MCB, RCCB, or fuse) .
- Spacing: The center-to-center distance between pins is usually standardized to match the modular devices mounted on DIN rails. For example, DIN rail-mounted MCBs often have a 17.5 mm module width per pole, which determines the pin alignment on the busbar .
- Material: Pins are typically made of copper or brass, sometimes tin-plated, to ensure good conductivity and corrosion resistance .
- Threading: Studs may be threaded (M4, M5, M6, or M8) to allow secure fastening of incoming and outgoing cables .

Industrial Connector Standards

For industrial or outdoor distribution boxes using plug-and-socket connectors, the IEC 60309 standard defines pin sizes and configurations:...
