

Support for Anti-Electro-Tracking Technology of Spiral Wrapping Tubes

Article Overview

Anti-electro-tracking spiral wrapping tubes use specialized materials and design features to prevent electrical tracking, enhance insulation, and protect medium-voltage cables from environmental and electrical stress.

Overview of Anti-Electro-Tracking Technology

Anti-electro-tracking technology is designed to prevent the formation of conductive paths on the surface of insulating materials, which can occur due to moisture, dust, or electrical stress. Spiral wrapping tubes, when enhanced with anti-tracking properties, provide long-term electrical insulation, erosion resistance, and environmental protection for cable bundles and terminations .

Materials and Construction

- **Crosslinked Polyolefin:** Most anti-tracking tubes are made from crosslinked polyolefin, which offers high dielectric strength, chemical resistance, and flame retardancy .
- **Stress Control Adhesive:** Some tubes incorporate an inner layer of hot-melt adhesive that provides electrical stress control, reducing the risk of partial discharge and surface tracking .
- **Flame Retardancy and UV Resistance:** These tubes are often halogen-free, flame-retardant, and resistant to UV, chemicals, solvents, and fungus, ensuring durability in harsh environments
