

# Terminal Box Fiber Optic Tools

## Article Overview

Fiber optic terminal box tools include termination kits, splicing tools, inspection devices, and cleaning equipment essential for efficient fiber management and network installation.

### Fiber Optic Termination Kits and Tools

Fiber optic termination kits are designed to provide all necessary tools for assembling and maintaining fiber optic systems. Typical kits include pin and socket polishing tools, jacket strippers, shears, scribes, and test probes for both lab and field use. Polishing tools may be supplied for wet or dry polishing depending on the application. These kits allow technicians to perform precise termination, splicing, and testing of fiber optic cables on-site, ensuring optimal signal performance and minimal insertion loss (less than 1.0 dB) during measurements .

### Inspection and Cleaning Tools

Proper inspection and cleaning are critical for maintaining fiber performance. Tools such as fiber video borescopes, FiberChek Pro systems, and dry action cleaning devices enable technicians to inspect end-faces, remove dust and oil contamination, and verify connector quality. Dry cleaning tools are particularly effective for field use, avoiding the risks of wet swabs that can introduce contaminants or require drying time .
