

Waterproof and dustproof rating of engineering distribution boxes

Overview

Constructed from high-strength materials like glass fiber-reinforced polyester (SMC) or corrosion-resistant ABS/PC blends, these enclosures achieve IP65/IP67 protection ratings, effectively shielding electrical components from water jets, dust ingress, and corrosive agents. Selecting the right protective enclosure requires looking beyond water resistance to evaluate strict particle ingress limitations. A high-quality waterproof distribution box must prevent fine industrial dust from compromising internal components. This guide primarily analyzes structural engineering characteristics, technical specifications, and actual installation procedures to achieve optimal field performance. Meet IEC standards for reliable electrical protection. EKDB10 Series IP65 Waterproof Distribution Box is an advanced. Distribution boxes are a component of your electrical supply system dividing electrical power feeds into subsidiary circuits while offering a protective fuse or circuit breaker for every circuit in a common enclosure.
