

What is LAN1 on the EPON user terminal device

Overview

LAN1 port – A 10/100/1000-Mbps gigabit Ethernet port that connects the appliance to the network. When many friends use the home network, they find that there is one WAN interface and 4 LAN interfaces on the router, but they do not know the difference between the LAN1 interface and the LAN2, LAN3, and LAN4 interfaces. This article will talk about the related knowledge. There is no difference. This user manual provides comprehensive instructions for the installation, operation, maintenance, and troubleshooting of the HG8245C XPON/EPON Optical Network Terminal (ONT). The HG8245C is a high-performance device designed to provide broadband access, voice, and Wi-Fi services to home and small. Indicators from left to right are as follows: Power, PON, LOS, LAN1, LAN2, LAN3, LAN4, TEL1, TEL2, USB, WLAN, WPS, CATV. 1 Installation Precautions □ Do not near flammable or conductive items, high temperature, direct sunlight or moist environment, or on PC chassis, and check whether other home equipment placed around stability □ Check the cable line. Test and confirm the ac or dc input voltage in the range. Do you have a question about the 1GE+WIFI EPON ONU and is the answer not in the manual?
