

What is an X2 optical module

Overview

X2 is a standardized package of the 10G optical transponders. X2 are available for both versions 10G Ethernet and 10G Fibre Channel. X2 optical transponder is only applied to the data communication optical fiber connection (not used in the telecommunications transmission network), and their size is. The Cisco ® 10GBASE X2 modules (Figure 1) offer customers a wide variety of 10 Gigabit Ethernet connectivity options for data center, enterprise wiring closet, and service provider transport applications. Its development was based on former XENPAK standards. The inner function of X2 10Gbit/s transceiver is almost similar with XENPAK so that we also can use X2 transceiver to fulfill all 10 Gigabit Ethernet (10GbE) optical. As defined in X2 Multi-Source Agreement, the X2 transceiver is a compact 10 Gigabit/s optical transceiver designed to use a side rail support system that allows the heat sink and front bezel to be easily adapted to the different needs of the key 10 Gb/sec markets.
