

What is the PIN code for a Huawei fiber optic router

Article Overview

The WPS PIN on a Huawei fiber optic router is usually printed on a sticker on the underside or back of the device, and can also be accessed via the router's web interface or the HUAWEI AI Life app.

Physical Location

On most Huawei fiber optic routers, including models like the OptiXstar HG8145V5, the 8-digit WPS PIN is printed on a label or sticker located on the underside or back of the router. This label often includes other important information such as the SSID, default Wi-Fi password, model number, and serial number . Some routers may have a small removable panel or cover that needs to be opened to reveal the PIN .

Access via Web Interface

If the PIN is not visible on the router itself, you can access it through the router's web-based management page:

- Connect your device to the router via Wi-Fi or Ethernet.
- Open a web browser and enter the router's default IP address (commonly 192.168.3.1 for Huawei routers) in the address bar .
- Log in using the admin username and password (usually printed on the router label or in the user manual).
- Navigate to the WPS or Wi-Fi settings section to view or generate the PIN
