

Wireless AP Switch PoE

Article Overview

A Wireless AP Switch with PoE combines network switching and wireless access point functionality, allowing centralized management and power delivery over Ethernet cables.

Overview

A Wireless AP Switch with PoE integrates two key functions: it acts as a network switch to connect multiple devices and provides Power over Ethernet (PoE) to power wireless access points (APs) without separate power adapters. This setup simplifies installation, reduces cabling, and enables centralized management of multiple APs.

PoE Standards and Power Delivery

PoE allows data and DC power to be transmitted over the same Ethernet cable. Key standards include:

- IEEE 802.3af (Type 1): Up to 15.4W per port
 - IEEE 802.3at (Type 2, PoE+): Up to 30W per port
 - IEEE 802.3bt (Type 3/4, PoE++): Up to 60–100W per port
- Power can be delivered using Alternative A (data pairs), Alternative B (unused pairs), or 4-Pair PoE (4PPoE) for higher wattage devices. Most modern APs, including Wi-Fi 6 and Wi-Fi 7 models, support PoE+ for efficient deployment.
